

Kentish Plovers with 1 gram GPS tags

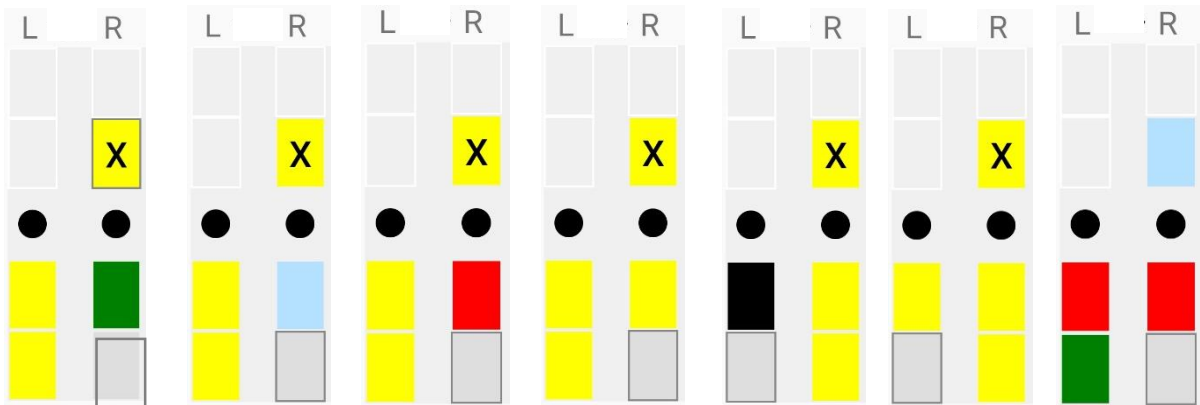

equipped at Beltringharder Koog, northern Germany, to identify wintering quarters and stop-over sites of that population in 2019

Birds have to be **re-trapped** to achieve GPS fixes in subsequent years. Please **directly inform** Dominic Cimiotti about sightings of these individuals (and other Kentish plovers of those ringing schemes)!

In case of a **re-catch elsewhere**, please take the logger off the bird from January 2020 onwards by cutting the silicon tube (one loop around each leg).
